

C4T
CHARTER

The growing digitization of economic activities has brought undeniable benefits to our society. Digital companies, especially those in cybersecurity, are at the forefront of this digital shift. However, this digitization has significant environmental impacts, expands citizens' exposure to online risks, and creates a strong demand for specialized skills.

In response to these challenges, I have decided to take action and join the cyber community [in France and Europe], committed through the Cyber4Tomorrow initiative!

The Cyber4Tomorrow catalog and its available resources enable every cybersecurity professional to take meaningful action by integrating sustainable practices into the development and deployment of cybersecurity solutions, raising awareness among individuals and organizations about the importance of good digital hygiene practices, and promoting accessibility to cybersecurity careers for all.

By joining Cyber4Tomorrow, I am convinced that cybersecurity plays a vital role in fostering responsible digital practices, and that every professional in cybersecurity can contribute, at his or her own level, to a safer, more sustainable, and more attractive digital world.

- As a Cyber-Committed Professional, I [mobilize] [devote] part of my time to carrying out one or more actions from the C4T Catalogue throughout the year and to promoting the initiative within my professional ecosystem (company, institution, professional organization, clubs etc...) and personal network (peers, associations, challenges, etc...).
- As a Cyber-Committed Professional, I use [and disseminate] the resources available on the C4T platform, I contribute to the animation of the community by sharing my ideas and feedback on actions I undertake. If necessary, I propose new ones.

I, the undersigned _____,
adhere to the Cyber4Tomorrow Charter and commit to upholding its principles.
